Dynamic DNS Resources

Dynamic DNS Clients

This is the area where you can download one of the dynamic DNS clients which support FreeDNS

Programmer's XML API

For those who write their own update clients, this allows the downloading of account contents dynamic DNS URLs easily within custom applications for easy maintenance.

Rotate Authentication Token

If you suspect someone has gotten unauthorized access to your update URL, this utility will rotate **ALL** of your update URLs for security reasons. Your old update URLs will no longer be valid.

NOTE: If you've written a client, or have added afraid.org support to your product, please drop me a note so I can add it to the supported clients list.
dnsadmin@afraid.org

TIP: You can override automatic IP detection host by appending &address=127.0.0.10 to any update URL (IPv6 addresses are also allowed)

Downloads to use the update utility:
wget for windows at <http://gnuwin32.sourceforge.net/packages/wget.htm>
cURL for win32 at <http://curl.haxx.se/windows/>

A way to automatically run wget for windows at <http://brontosaurusrexng.wordpress.com/2008/07/07/automatic-wget-on-windows/>
